Colloquium

Mathematics in the age of AI

Friday, October 16, 2026
3:00 p.m. Massry B010
(tea & coffee at 2:40 p.m.)

Abstract. AI capabilities in mathematics are advancing rapidly, with growing potential to assist in problem solving, proof discovery, formalization, computation, and conjecture generation. These developments could reshape mathematical research, but they also raise important concerns about reliability, verification, attribution, and the role of human insight. This panel (Justin Curry, Halyun Jeong, Kent Vashaw, and Felix Ye) will discuss the current state of AI for mathematics, where progress may be heading, and how the mathematical community should respond.

Please note that this panel discussion will be preceded by a short presentation delivered by Felix Ye. Further, please note that this panel discussion is anticipated to run until roughly 4:30PM.
